Save our Most Precious Natural Resource – Breastmilk!

Moms no longer need to lose a drop of their precious breastmilk

Vancouver, BC – The Milkies milk-saver is an alternative to a regular breastpad – instead of just soaking it up, it collects the breast milk that is leaked out when your milk lets down. Moms can store this milk and save it for any time you need it! Le Duck Distributors has recently signed on with Milkies International to offer this product through its network of mom/baby stores, hospital gift shops, lactation consultants and childbirth educators.

“We are so proud to present Milkies as they are a company dedicated to encouraging and supporting breastfeeding through eco-friendly, sustainable products” says Sandra Leduc, president of Le Duck Distributors. **“We want to give breastfeeding moms an alternative to disposable products. The milk-saver has exceeded all expectations for functionality and simplicity. It has received accolades from lactation specialists, pediatricians, and breastfeeding moms everywhere, and we know moms and babies will love it.”**

“The Milk-Saver has been rigorously tested to ensure zero chemical leaching, and is completely recyclable” says Helen Anderson, RN, co-founder of Milkies Intl. Founded in 2007 by a mom and daughter team of registered nurses, Milkies International has been featured in popular publications such as Pregnancy and Bump magazines. **“With my milk saver I am able to passively collect twice the amount I was getting by just pumping! My daughter is 18 days old now and since I began using a milk saver I have collected 10 ounces per night with only 2 feedings per night!”** says Stacey, a Milkies enthusiast. **“I can’t believe I wasted that much milk in a wash cloth before I discovered my Milk Saver”**

Available through Le Duck Distributors, Milkies are available for wholesale purchase by specialty mom/baby stores, birthing professionals, hospitals, drugstores and retail outlets.
